2024-2044

APPENDIX F

Murton Parish: Hedgerows and Fields

Introduction

Farming communities have seen large scale consolidation of farms and fields in

recent decades. Murton has been no exception. The Tythe Commutation plan

of 1842 plots some 200 fields in the Township. That field number and pattern

survived largely unchanged until the mid-twentieth century. As late as the

1960s there were six farms in Murton, as well as land worked by farmers

outside the Parish. Today there are two largish farms within the parish. Some

other land is cultivated on a smaller scale basis. A significant amount is farmed

from outside the Parish.

These changes in farming organisation and the relatively flat, intensive arable

potential have led to a significant alteration in field numbers and patterns.

Today there are about 60 separate fields in farming use, with consequently

many much larger fields. The historic small field pattern survives to some

extent close to the village.

A result of the consolidation of fields has been the grubbing out of many

hedgerows and the loss of trees. Large scale Ordnance Survey plans from the

mid-nineteenth to the mid-twentieth century show many more significant

trees than survive today. Indeed, there are few trees of great age. An oak tree

in a field to the east of Moor Lane with a girth of 4.6 metres will date from the

mid-eighteenth century. There are several other oak trees that are perhaps

around 200 years old. But much of the Parish is devoid of trees.

3

However, the Parish contains hedgerows of varying plants and trees, some of which, particularly along its boundary with the parish of Holtby, are not only beautiful in their own right but are of historical interest and should be well looked after and cherished.

Bob Missin, formerly the York City Council's Countryside and Ecology Officer, agreed to survey the hedgerows for us and we simply give the reports on the 17 hedgerows that he selected as worthy of specific comment and the two photographs that he used as the key (see below).

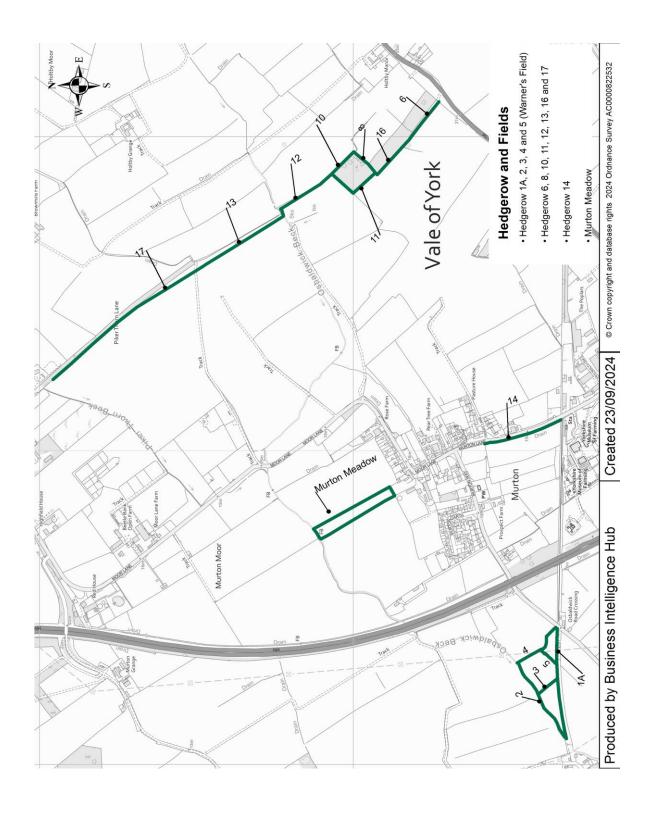

Figure F1 –The principal hedgerows are numbered and further details can be found later in this Appendix

Hedge patterns

The Murton field patterns (Figure F1) were and are typical of a later enclosure system with straight boundaries and many hedges removed or reduced because of the relatively flat, intensive arable landscape. There are however some relict earlier hedges that survive, notably those associated with the old parish boundaries. A number of hedges have been surveyed (see attached data sheets) and these typically contain 4 or 5 species of shrubs, notably Hawthorn, Blackthorn, Hazel, Oak and Dog Rose. The hedges forming the Murton/Holtby Parish boundary along Vengeance Lane and Whinney Hill are however particularly diverse with a number of less common species present including, Dogwood, Field Maple and Guelder Rose. In general though, the hedges within the parish itself, whilst not intensively surveyed, do not appear to be especially rich. For instance, the hedges to the south around Gells Farm towards the Hull Road, are predominantly heavily trimmed hawthorn hedges. With the largescale fields in the north of the Parish, there are few hedges. Where the fields contain Ridge and Furrow, the hedges do not necessarily follow the ridges as is usual with older enclosure hedges. The Ridge and Furrow is of interest in historical terms, unfortunately much of it has been improved or ploughed so the grasslands, where present, are generally not species rich. There are though several exceptions, notably a proposed Site of Importance for Nature Conservation (SINC) site called Murton Meadow, a small strip field with extant Ridge and Furrow just to the north of the village and a small relict meadow, Warner's Field, isolated by the construction of the railway line. These have a relatively diverse neutral grassland flora. Both meadows are in need of some

careful management though if their interest is to be maintained.

Surviving prominent Ridge and Furrow are clearly seen in most of the pasture fields in the triangle formed by Murton Way, Murton Lane and the old DVLR railway line.

A further field on the southern edge of the parish adjacent to the electricity substation is also of some interest having a moderate diversity but containing some species such as Adders Tongue Fern, an old grassland indicator that is uncommon in York. This site also has a relict of the old 19th century orchards planted to take advantage of the railway when it was first constructed. This is the site of the Grimston Villa, demolished in the 1950s, that had extensive fine grounds and orchards.

Further, the York Historic Environment Record has several detailed maps showing where there are still ridge and furrow fields¹.

Besides the significant fields and hedgerows listed below there are several other hedges that appear to be of some age: the surviving hedgerow along most of Smary Lane; the hedgerow alongside the eastern edge of the warehouses up to the Stamford Bridge Road which also contains two large and old oak trees; some of the hedgerow along the south side of Long Causeway, although this is in poor condition; and some of the hedgerow along the south side of Hammonds Lane although much of this also in poor condition.

There has not been any significant grubbing out of hedges in the past few years. It is to be hoped that the current field and hedge system can now be maintained for the future to protect the rural environment of Murton.

Figure F2 An aerial view of hedgerows in Murton Village The numbers refer to the hedgerows listed below. A is Warner's Field and B is Murton Meadow which could qualify as SINCs

-

¹ https://her.york.gov.uk/Designation/DYO1728

Field A (Figure F2) Warner's Field

This is a possible SINC. Details are given in Annex 1 of the Strategic Environment Assessment.

Field B (Figure F3) Murton Meadow

This is another possible SINC(wildlife grassland).

A proposal was made in 2010 following a survey on August 14th 2008. Details are given in Annex 1 of the Strategic Environment Assessment

Figure F3 An aerial view of hedgerows in Murton Village. The numbers refer to hedgerows identified below

Acknowledgements

We thank Bob Missin, formerly the York City Council's Countryside and Ecology Officer, who generously gave his time and expertise and surveyed the field and

hedgerows for us. Subsequently, Richard Dean and Richard Clancey helped with detailed measurements of the hedgerows to enable them to be mapped (Figure F1).

	Multi(I) M	lulti(s)						
	Comments -							
General Comments -	Meadowsweet on ditch bank. Alder saplings adjacent at bottom. One very mature Ash, close by (not in hedge) with very good bat roost potential – broken limbs, cracks, creases, rot holes and woodpecker hole etc. Ditch poor quality water coming from abattoir but does clear a bit down stream.

Parish Boundary					Υ		1			

Landscape Assessment	Old Parish Boundary hedge, essentially now a line of trees following an old farm track. Trees all tall and mature. Track itself is heavily shaded and bare with extensive Elder. Some bits of wildflowers present.
